

It's NOT about air! "Aeration" is a historic misnomer that has entered our lexicon of aquatic terms through an ancient lack of understanding. It's about OXYGEN!

Fish don't breathe air they absorb oxygen through their gills - but you know that! So! Why is everyone trying to get air into water? Even more bizarrely why do they throw water into the air in pursuit of "aeration" (fountains and surface agitators)? Well! Convention, ignorance and bad habits tend to endure!

With the new Airmaster WMS we have employed patented aerospace technology to oxygenate water in the most efficient manner possible - and we've been doing it for fish for over 12 years!

With the WMS we have developed an innovative system that delivers other benefits as well. It will distribute oxygen widely throughout a large body of water. It will ventilate and de-stratify stagnant areas and it can also be used to accurately/evenly disperse treatment products were necessary.

WMS can achieve a harmonious balance with nature quietly, efficiently and economically. Check it out!

**What the WMS achieves:**

***Below the water level***

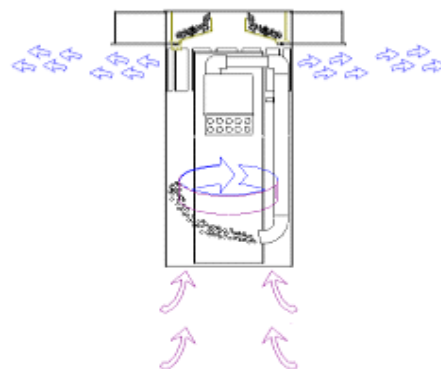

- Oxygenation at depth priming a natural life cycle
- Wide circulation ensures total treatment
- Promotes de-stratification to bring "dead" water into circulation
- Ventilates trapped negative gasses that pollute water
- Fish friendly - maintains water in a healthy aerobic condition in all climatic conditions

***Additional options***

- Foam Fractionation (purification) and dosing arrangements can be included
- A fountain with lighting and special features

***Flexible design and additional products***

- The Registered Design illustrated below embodies pump(s) and the patented Airmaster aquafoil with flotation chambers in a flexible innovative scheme that enables wide application in a variety of sizes and configurations

**Initial Inquiry Form**

What size is your pond/lake?

How many ponds?

- Length
- Breadth
- Mean Depth

Is the pond water fed by a stream or irrigation system?

- Stream
- Irrigation
- No

\* Units — Feet Yards Metres

Is there a problem with water quality ?

- Yes
- Partly
- No

Is electricity available on or near the site?

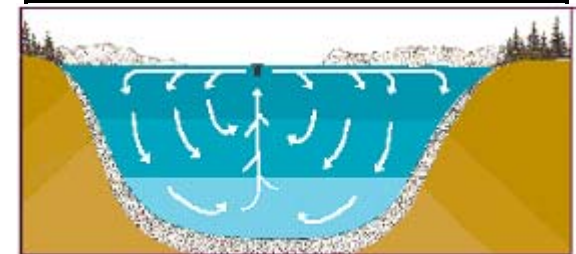

- No
- Yes
- Single or Three phase?
